

Our Key to Success and Commitment

People Are the Key to Our Success

The mainstay of any successful business is its people. Since our inception in 1973, we've accumulated a work force of outstanding professionals in every discipline, from Design and Test, to Marketing and Manufacturing... many of whom have been with us from the start!

In-House Capabilities for Total Control

Having total in-house capabilities, we provide our customers with high quality products with rapid delivery and competitive prices.

Our Custom Products Are Standard

Neo-Dyn® does not offer a "standard" product line... primarily because each of our customer's requirements are different. What we do offer is a standard line of "envelopes" which allows us to customize the pressure, temperature and media requirements to meet your individual needs. This means faster turnaround times and more competitive pricing. To this end, we have numerous QPL approved switches.

Total Reliability

Neo-Dyn's "Nega-Rate®" Belleville disc spring offers:

- Stable set points... eliminates constant recalibration
- High over pressure capability... with no effect on set point accuracy
- High cycle life and vibration resistance... over a wide range of temperatures and media

Commitment to Research and Development

As a technology leader, Neo-Dyn® is committed to being on the cutting edge of development for new manufacturing methods and materials in order to meet our customer's future needs.
